JavaScript

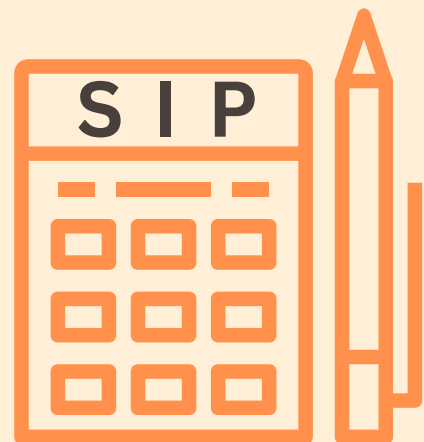

CSS

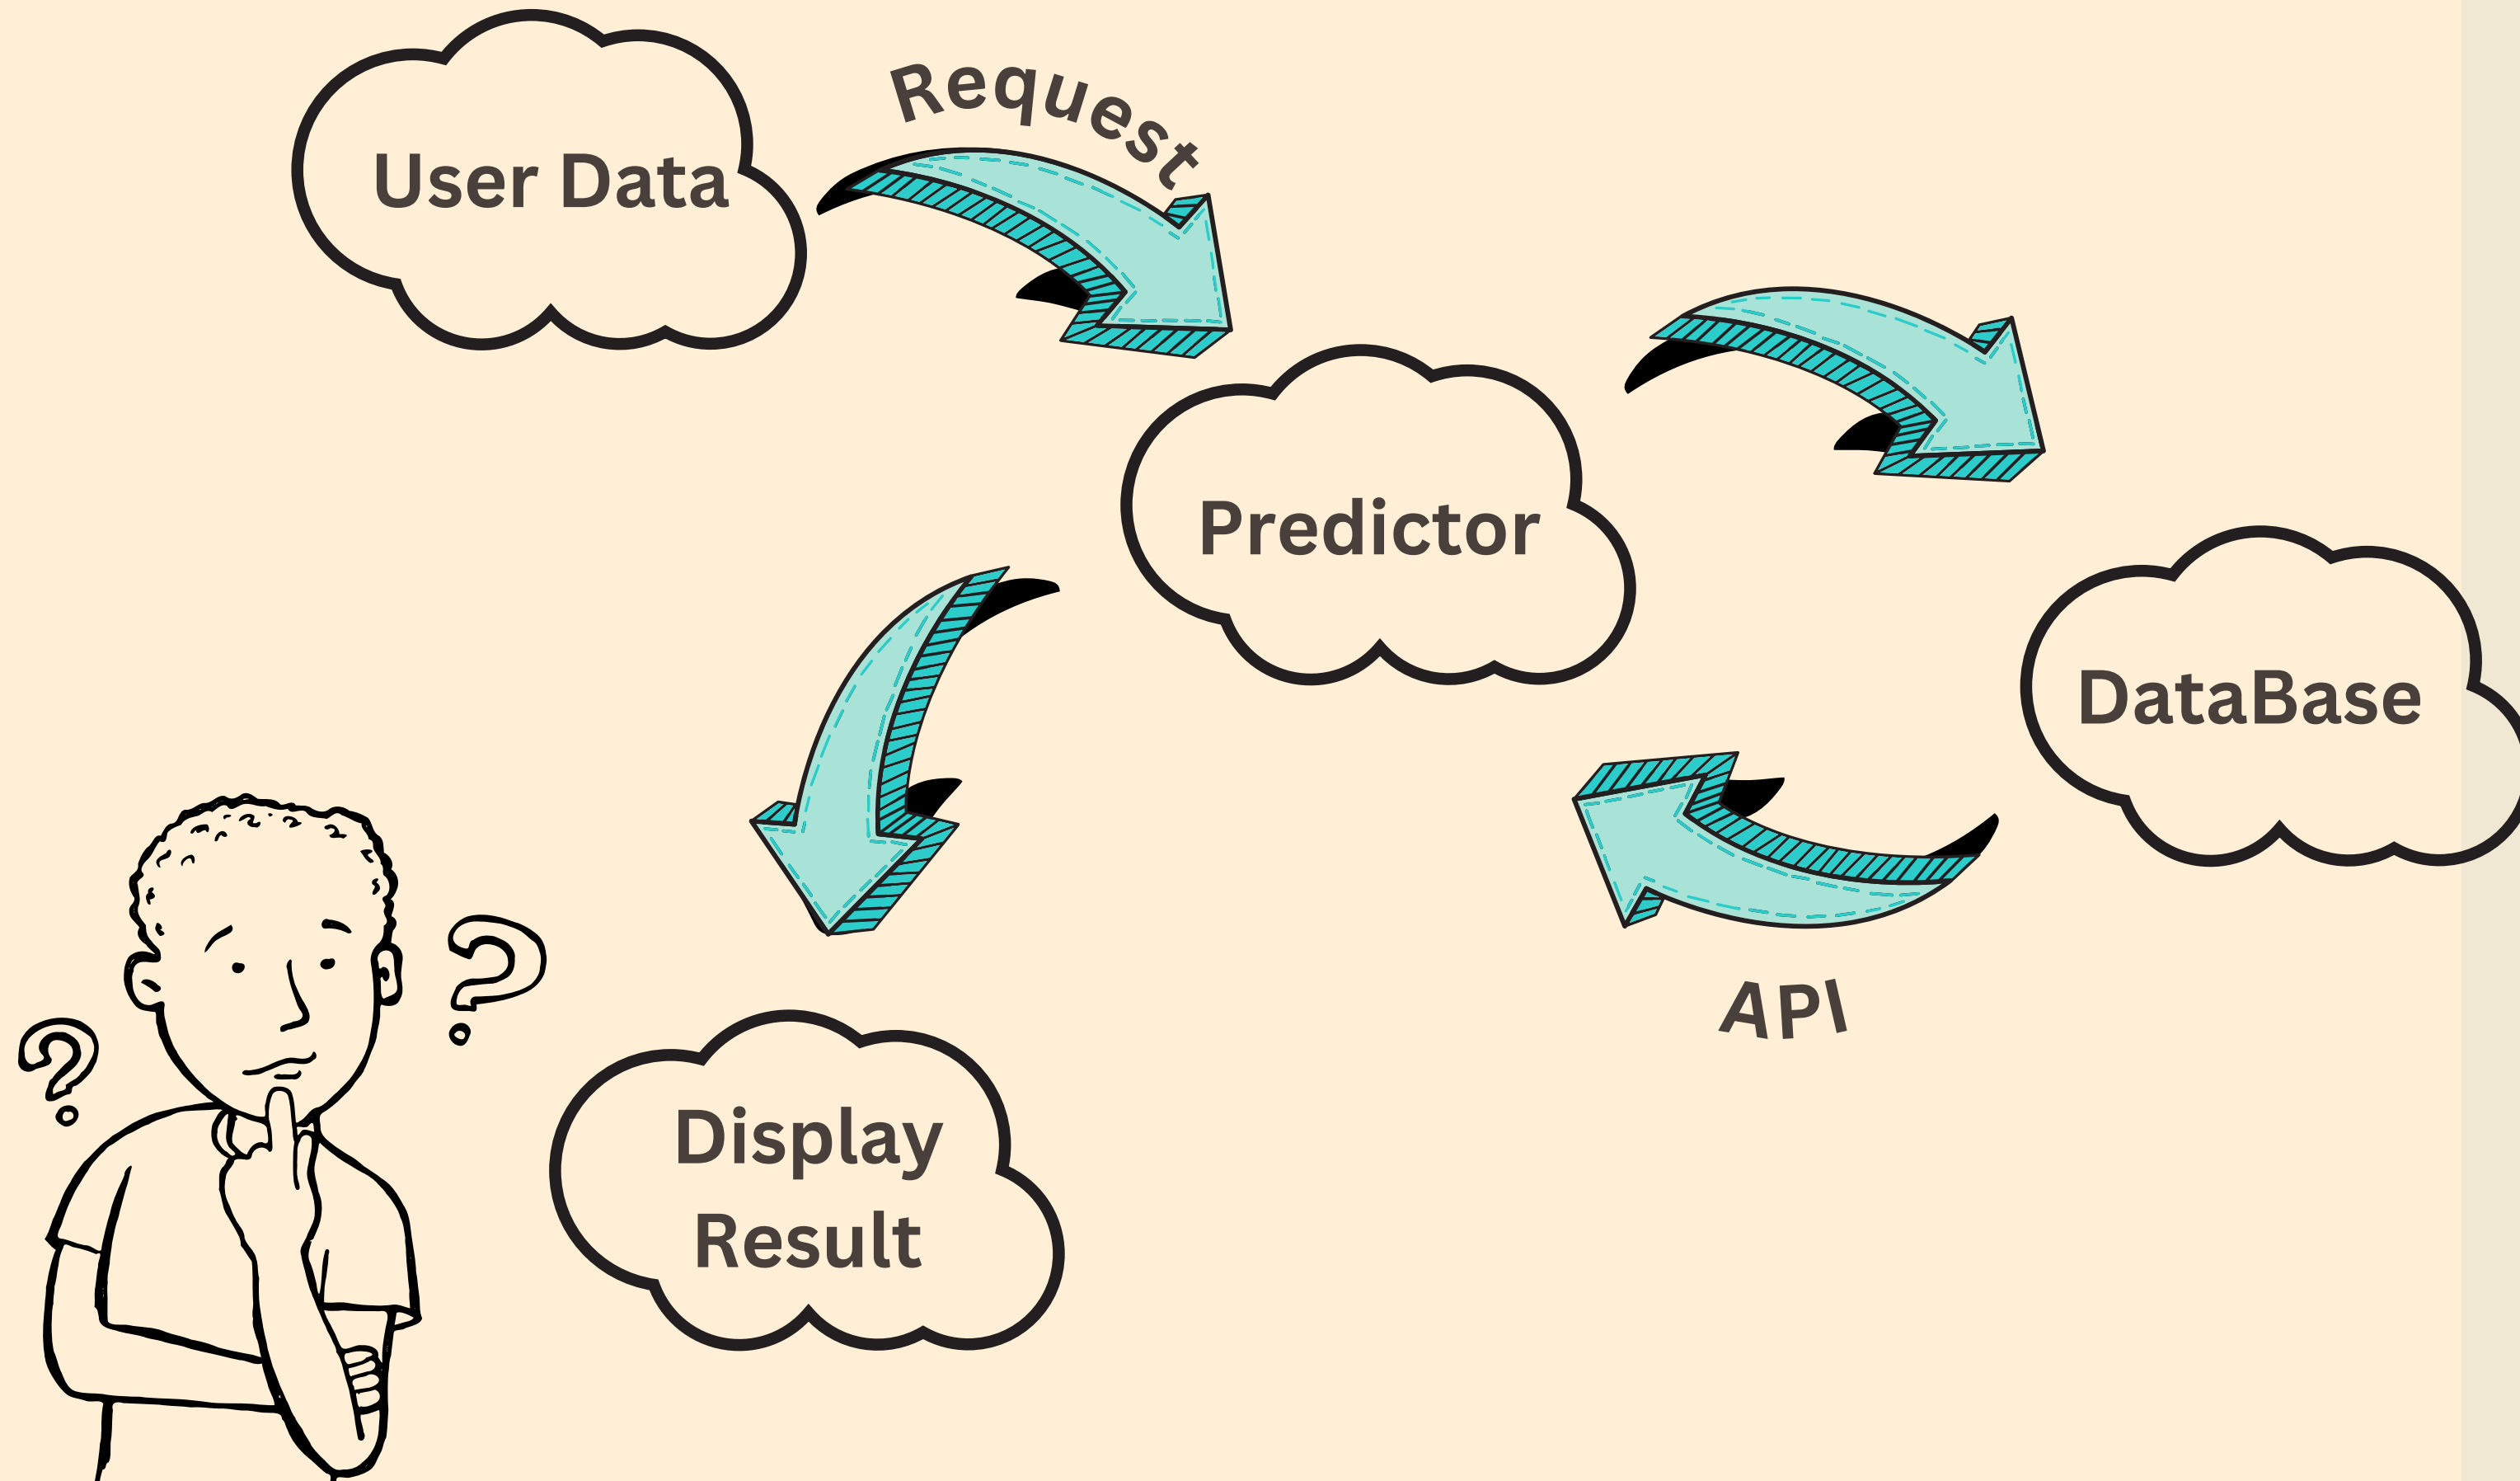

HTML

Nodejs

FLOWCHART

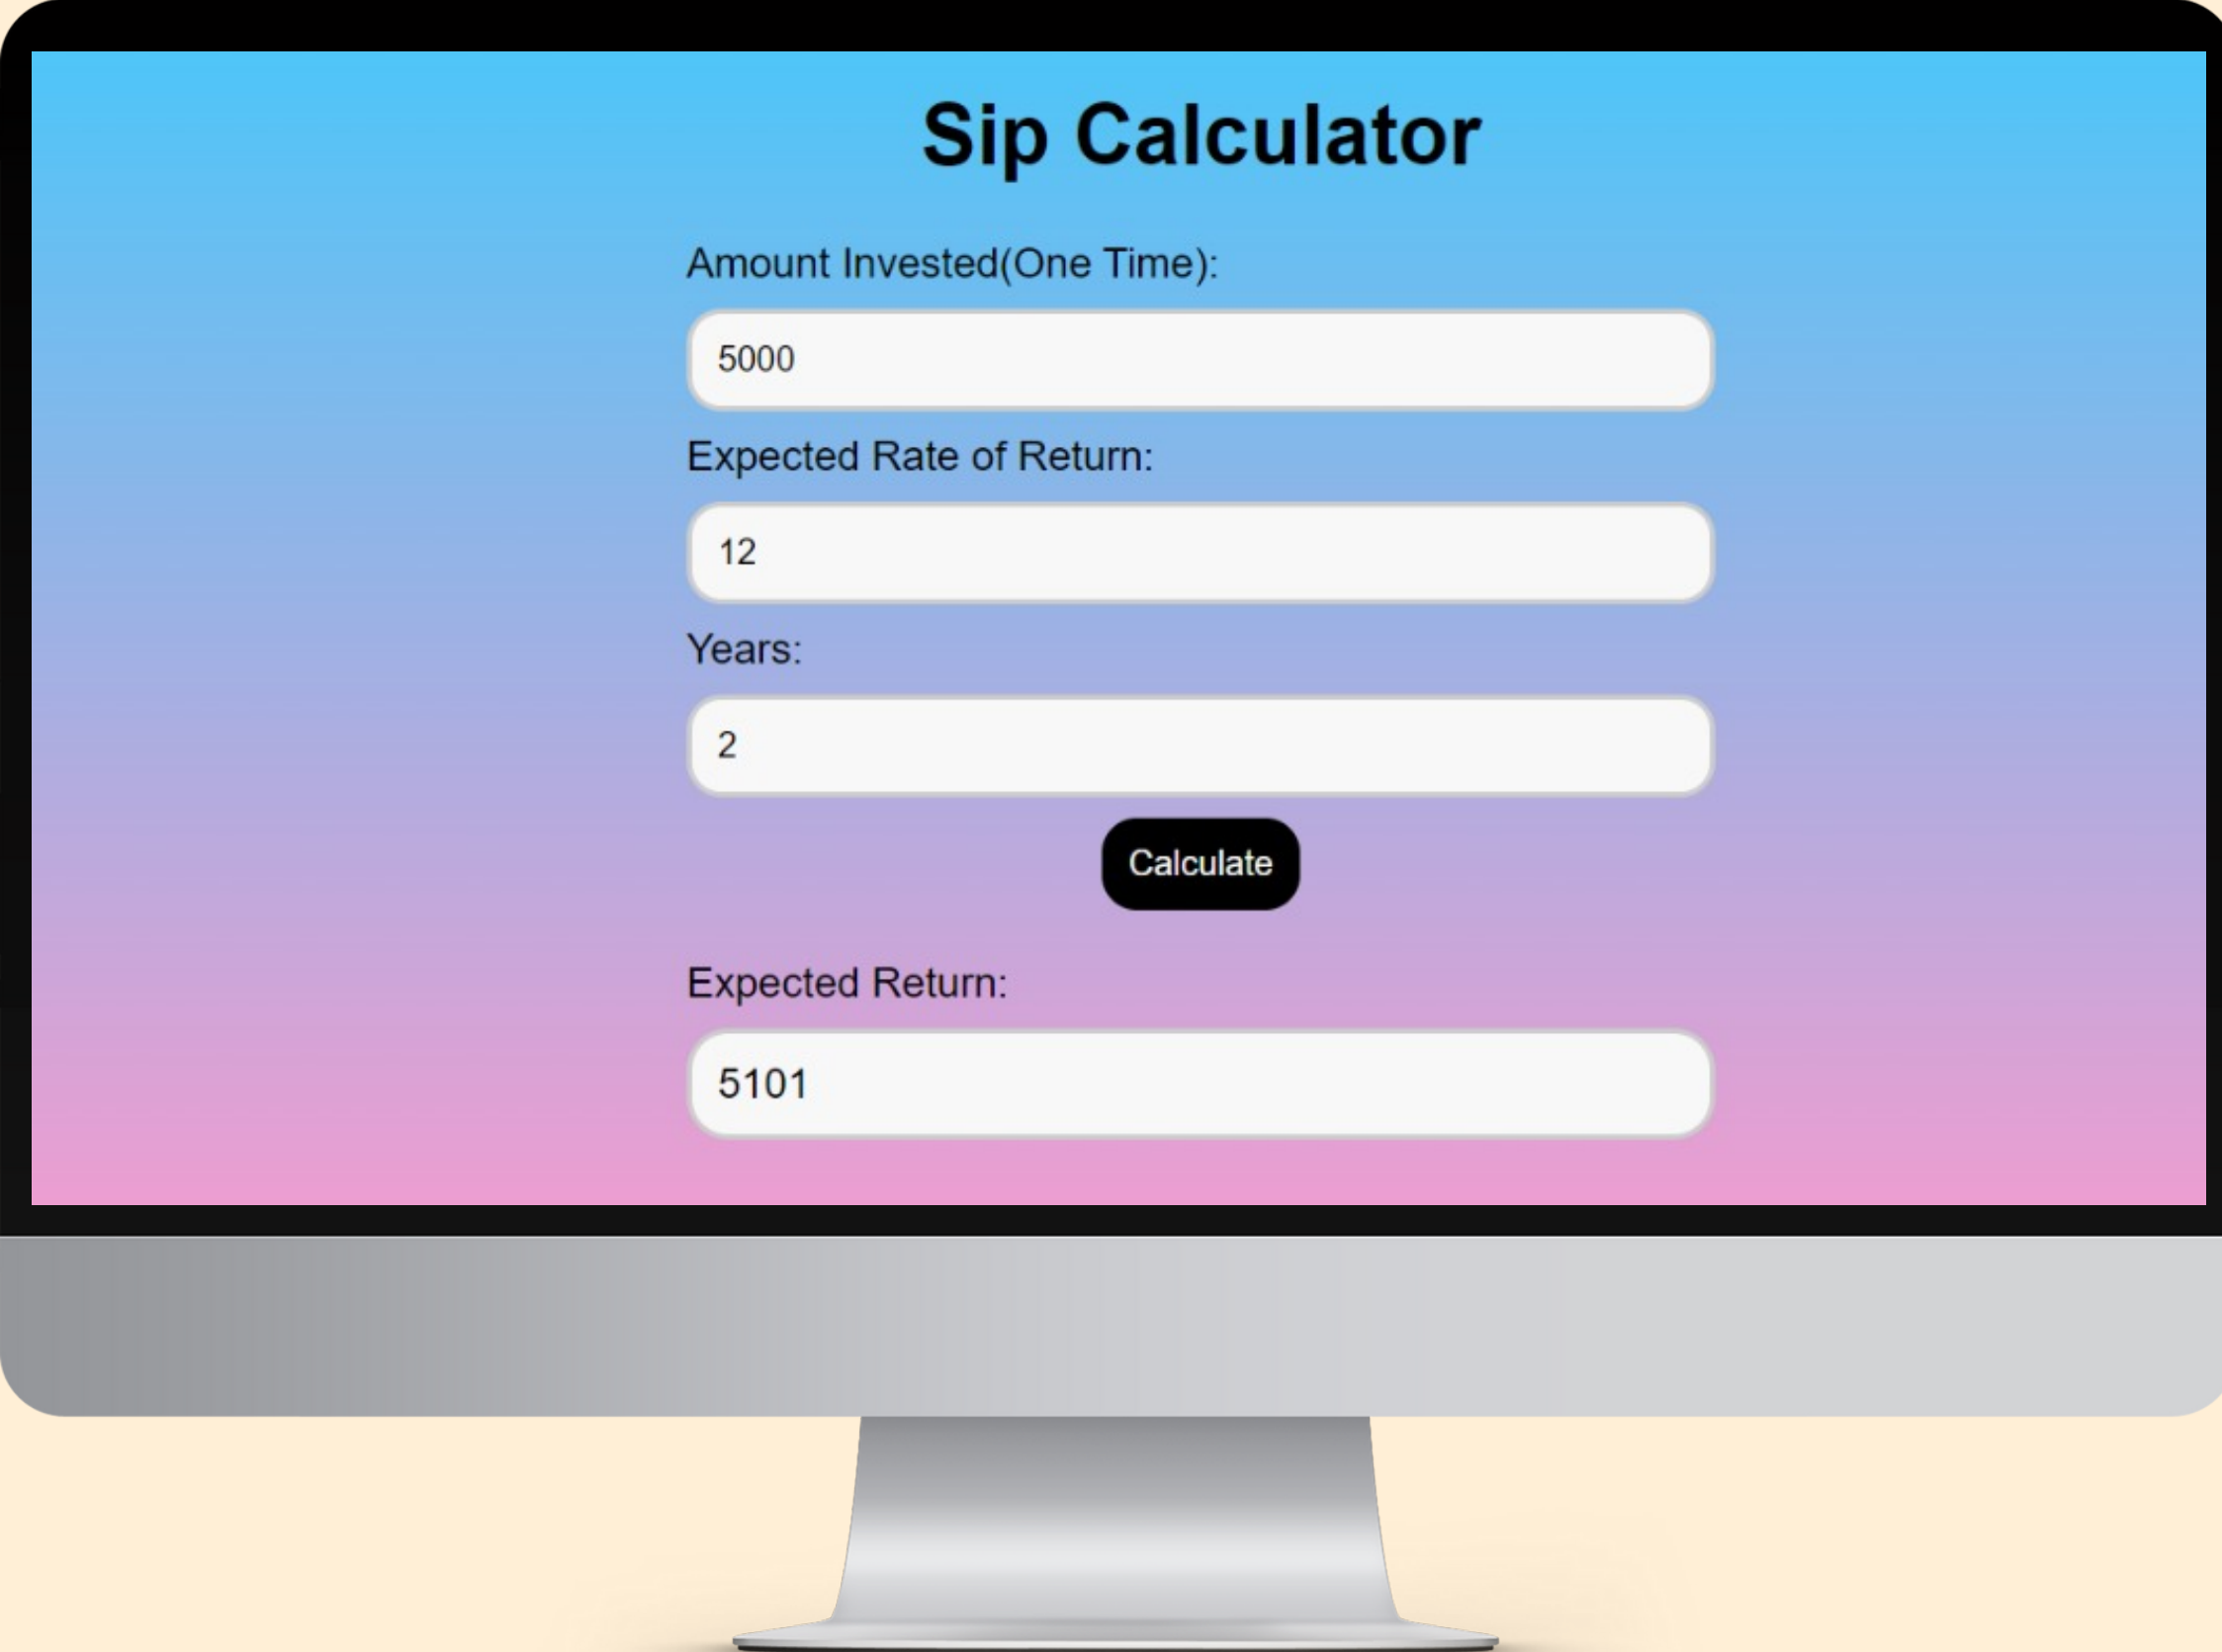

WORKING

- The data is fetched from the user & it goes to predictor where the processing begins.
- Predictor takes the data from the database with the help of API
- This data is then processed according to the needs of the user
- After processing has taken place, then we display the data

SIP CALCULATOR

The image shows a computer monitor with a silver stand and base. The screen displays a web application titled "Sip Calculator". The background of the application is a gradient from light blue at the top to pink at the bottom. The form contains the following elements:

- Title:** "Sip Calculator" in bold black text at the top center.
- Input 1:** "Amount Invested(One Time):" followed by a white rounded rectangular input field containing the value "5000".
- Input 2:** "Expected Rate of Return:" followed by a white rounded rectangular input field containing the value "12".
- Input 3:** "Years:" followed by a white rounded rectangular input field containing the value "2".
- Button:** A black rounded rectangular button with the text "Calculate" in white, centered below the input fields.
- Output:** "Expected Return:" followed by a white rounded rectangular output field containing the value "5101".
